

Thematic Analysis Pipeline Architecture

Legend:
REST API

Key Features:
• End-to-end thematic analysis (P2 → P3 → P3b → P4)
• Live progress via WebSocket

Typical Workflow:

1. Upload dataset (JSON) via Data Browser
2. Run P2 to generate initial codes with live progress monitoring
3. Run P3 to derive candidate themes, auto-triggers P3b for finalization
4. Run P4 to assign finalized themes back to dataset
5. Export results or continue refinement with Theme Explorer
